

Železniki, Slovenia

Population

agglomeration: 6,709
city: 2,959

Land area

13 km²

Population density

235 inhabitants/km²

Železniki lies in an area with a hilly terrain and dispersed settlement pattern. It hinders the public transportation, walking and cycling as modes of mobility. Therefore, people use cars as the most common means of transportation, even for short trips.

There is public transportation, but it is not frequent enough to be useful for people travelling to work. Walking and cycling are not common as modes of mobility since there is no cycling infrastructure and pedestrian infrastructure is poorly developed and unconnected.
