

Borovnica, Slovenia

Population

agglomeration: 4,412
city: 2,558

Land area

1 km²

Population density

455 inhabitants/km²

Borovnica had a high population growth in recent few years. It has very intensive daily migration activity where cars are still the most common means of transportation.

On the other hand, public transportation is often used and is gaining popularity since trains are new, fast and frequent. Pedestrian infrastructure is unconnected and poorly developed. Cycling is not common as mode of transportation since the infrastructure is unsuitable for cycling.

The distances in the municipality are generally short and ideal for walking and cycling, but to make these modes more attractive the network expansion and adaptation of cycling and pedestrian paths is necessary.
