

Jesenice, Slovenia

Population

agglomeration: 20,759
city: 12,926

Land area

9 km²

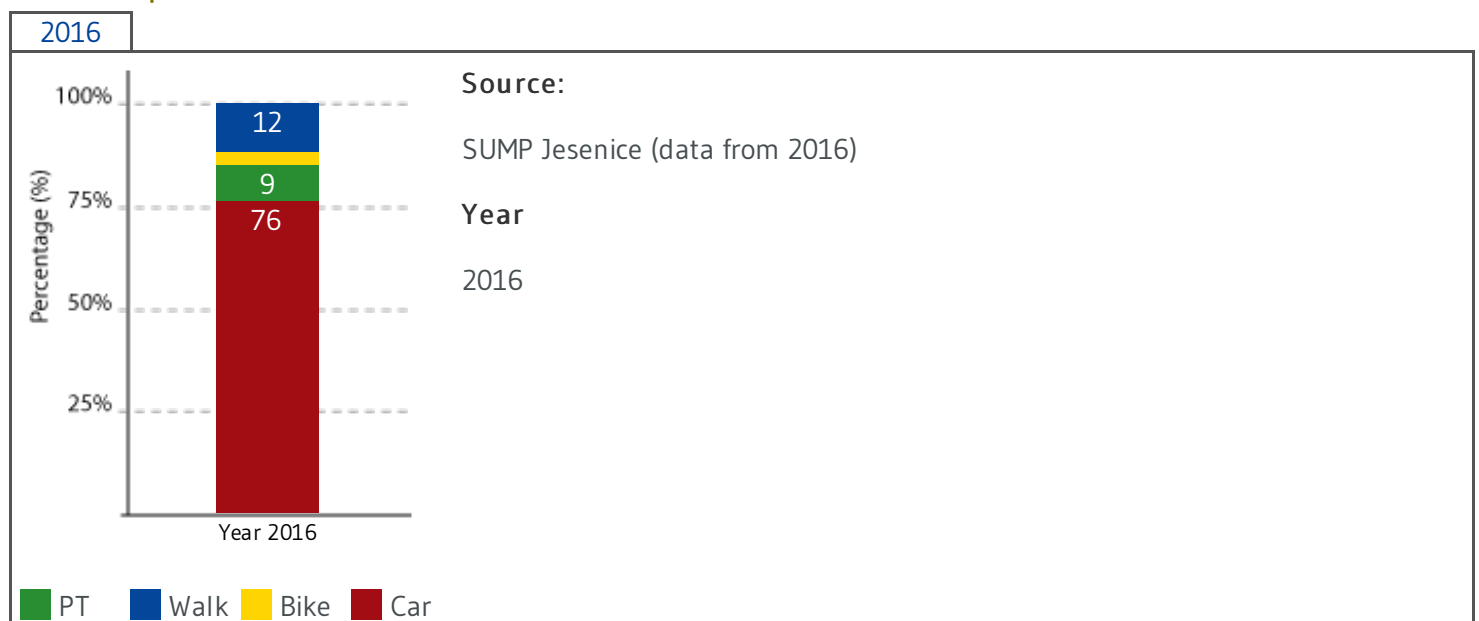

Population density

1514 inhabitants/km²

Jesenice lies close to the railway and motorway, so it is very well accessible. Cars are still the most common means of transportation.

Public transportation is used very rarely because it is not frequent enough and not fast enough to be an attractive mode of mobility. Bicycle sharing system is established, but bicycles are not used much because of the hilly landscape that is not very comfortable for cycling.

Contact person for Sustainable Urban Mobility Planning

Email: obcina.jesenice@jesenice.si

City website: <http://www.jesenice.si>

Participation in previous and current EU transport related projects

- IDAGO (2011 - 2015)
IDAGO aims to improve accessibility and attractiveness of mountain border areas by offering alternative bus transportation and improving conditions for cycling and walking.

Status of the Sustainable Urban Mobility Plan

[Sustainable Urban Mobility Plan](#) exists.

Municipality of Jesenice adopted its 1st SUMP in 2017 and are implementing it.
