

Medvode, Slovenia

Population

agglomeration: 16,362
city: 5,247

Land area

4 km²

Population density

1248 inhabitants/km²

Medvode lies in the area that is very well connected to the national road network. Cars are the most common means of transportation in the municipality. There is a road with heavy transit traffic splitting the town in two. Heavy traffic is inconvenient for pedestrian and cyclists.

Public transportation is functioning well in the town, but in the wider area of the municipality it isn't because of the dispersed settlement pattern. The flat terrain makes the area ideal for walking and cycling, but to make these modes more attractive the network expansion and adaptation of cycling and pedestrian paths is necessary.
