

Miklavž na Dravskem polju, Slovenia

Population

agglomeration: 6,553
city: 4,084

Land area

5 km²

Population density

822 inhabitants/km²

Miklavž na Dravskem polju has intensive daily migration activity where cars are still the most common means of transportation for commuters travelling to work to other municipalities. This is the result of the dispersed settlement pattern and the hilly landscape of the municipality. It also hinders the possibility of functioning public transportation.

Walking and cycling are not common since the infrastructure is underdeveloped and unsuitable for it. Since the distances in the municipality are short, they could be travelled by walking or cycling if the infrastructure was suitable for it.
