

Pivka, Slovenia

Population

agglomeration: 6,044
city: 2,109

Land area

7 km²

Population density

320 inhabitants/km²

Pivka lies in a region that is well accessible and connected to the national motorway network and railway network. Cars are still the most common means of transportation in the municipality. The network of public transportation is very widespread, so it is very accessible by most of the people. Passengers can take bicycles on the train to travel sustainably.

Nevertheless, public transportation is not frequent enough to be an attractive mode of mobility. Walking is not very common, since the infrastructure is not attractive for walking and distances in the municipality are long. Cycling infrastructure is partly built. Ambitious expansion of cycling infrastructure is foreseen in strategic documents of the municipality.
