

Radovljica, Slovenia

Population

agglomeration: 18,872
city: 6,077

Land area

5 km²

Population density

1237 inhabitants/km²

Radovljica is well connected by a railway and a motorway. It has intensive daily migration activity, where cars are still the most common means of transportation for commuters travelling to work to other municipalities.

Public transportation is used only by school children and it is not frequent enough to be used daily as a mode of mobility. Cycling in the wider area of the municipality is not common since the infrastructure is unsuitable for cycling and therefore not attractive, even though distances are short enough for cycling.

The flat terrain and short distances make the area ideal for walking and cycling, but to make these modes more attractive the network expansion and adaptation of cycling and pedestrian paths is necessary.
