

Focus session

B2: Citizen-centric solutions in mobility

9.00–10.30

**TRANSPORT
AND MOBILITY**
research team

Long-term effects of COVID-19 epidemic and challenges for mobility management

Hana Brůhová Foltýnová

European Conference on Mobility Management 2022

1 June 2022

UNIVERZITA J. E. PURKYNE V USTI NAD LABEM

T A
Č R

- **Project duration:** 07/2020 – 06/2022

- **Project partners:**

UJEP and

STEM/MARK

UNIVERZITA J. E. PURKYNE V USTI NAD LABEM

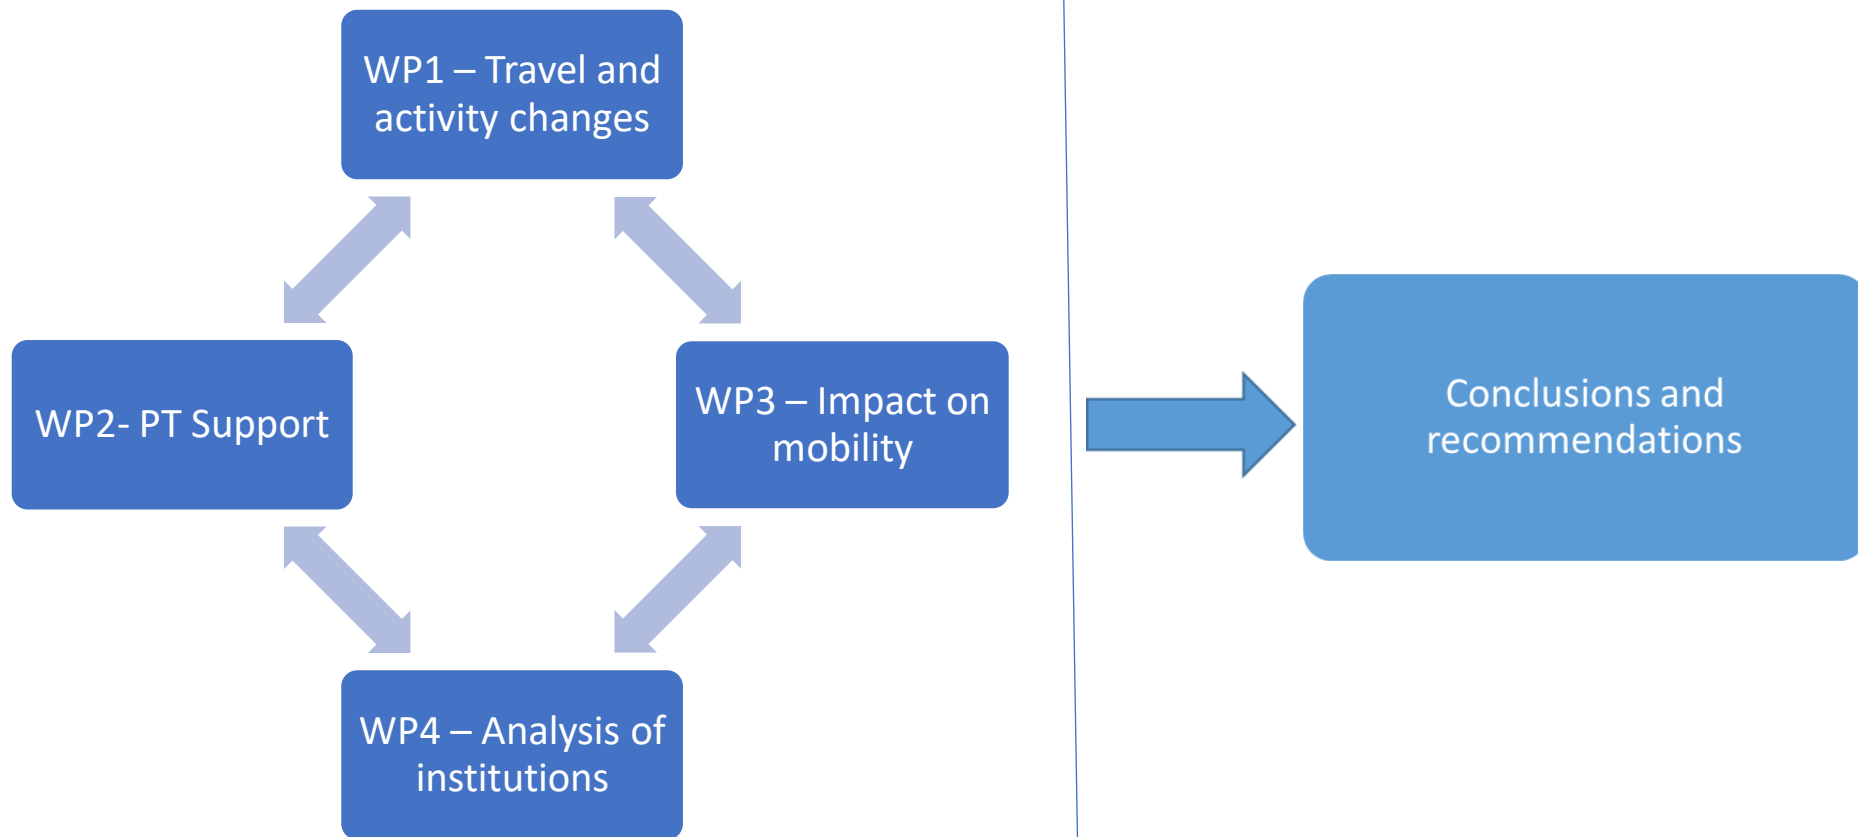

STEM  MARK

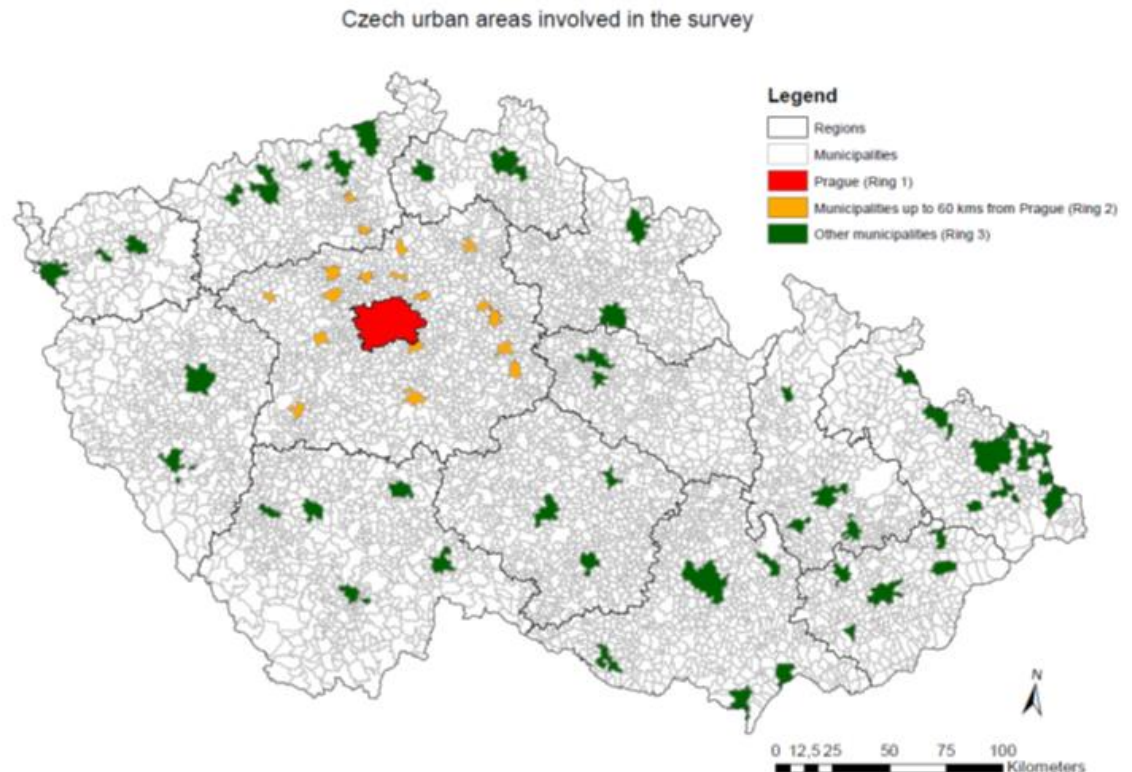

- **Supporting institutions:** Czech Ministry of Transport, ROPID, KORDIS
- **Cooperating institution:** Technion - Israeli Smart Transportation Research Center, Haifa

- Short-term and long-term **changes in travel behaviour** during / after COVID-19, new trends for main types of journeys
- Mobility system, (temporary) **measures to prevent COVID** and improve the PT system
- Decision-making of **public authorities during COVID** + good practice and recommendations

- **Target group:** urban population 18+, economically active
- **Representative sample** (quota for sex, age, education and income + place of residence)
- **Geographic coverage** - cities over 20 ths inhabitants
 - Prague
 - Central Bohemian region
 - Rest of Czechia

- **Online questionnaire:** activities and related travel behaviour + socio-demo, questions on Covid-19 experience (incl. quarantine) etc.
- **4 waves of data collection** on the same sample of respondents
 1. N=1103, data collection 5 – 15 June 2020
 2. N=805, data collection 5 – 18 Nov 2020
 3. N=703, data collection 10 – 24 May 2021
 4. N=707, data collection 23 Sept – 18 Oct 2021
- The same questionnaire used in Israel (2 waves of data collection)

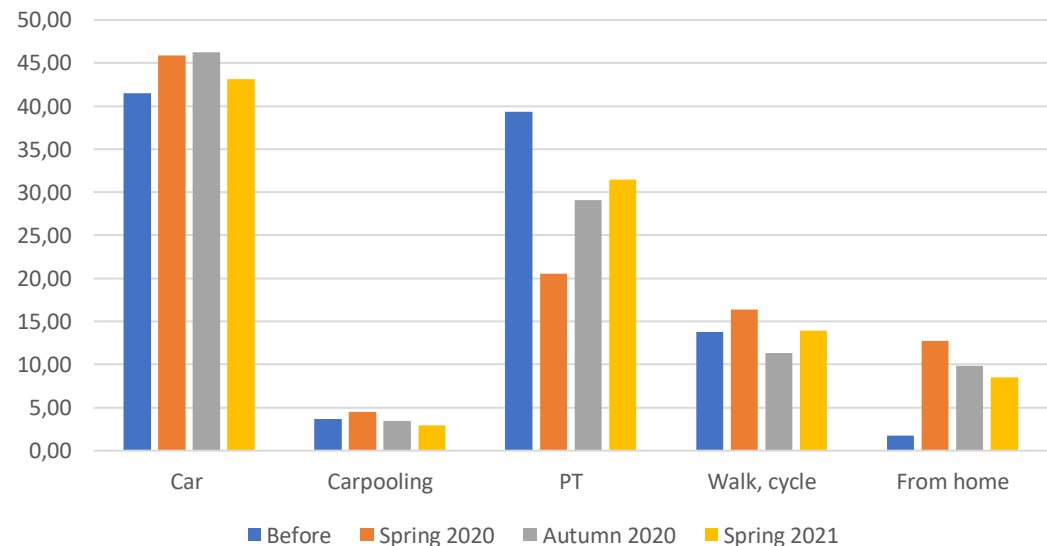

Findings – commuting to work

TRANSPORT
AND MOBILITY
research team

- The changes in commuting to work occurred most at PT users: only 45% of them continued using PT for commuting to work during COVID restrictions
- Those who switched from PT:
 - started to use personal or company cars – 15%
 - about 8 % switched to cycling or walking,
 - 15 % started to work from home or stopped commuting to work for another reason (14 %).

Modal split for trips to work

Findings – commuting to work (1st wave)

**TRANSPORT
AND MOBILITY**
research team

Travel mode to work	Israel			Czechia		
	Before	During	After	Before	During	After
Car	58%	42%	60%	44%	45%	45%
PT	31%	5%	26%	38%	18%	33%
Non-motorised	8%	5%	9%	14%	15%	16%
Other	3%	48%	5%	4%	22%	6%

Highlights of findings – trips to work

- The highest share of travel modes during the COVID pandemics: **cars - 45 % and PT - 35 %**
- Decrease of PT use after the COVID pandemics is expected, comparing to the status before
- **Non-motorised** transport share – **under 20 %**, it is quite stable, data reveal commuting to work during the COVID pandemics will not change the cycling and walking shares significantly afterwards

Highlights of findings – home-office

- **Increase in home-office after the COVID pandemics** is expected – especially for partly home-office regime: 2-3 days a week
- **Full home-office** will slightly increase (based on a type of work, employer and willingness of employees to work from home)
- Home-office does not necessarily mean a decrease in n. of trips (because of some **extra trips** which were previously covered while commuting to work – like shopping, meeting friends etc.)

Highlights of findings - shopping

**TRANSPORT
AND MOBILITY**
research team

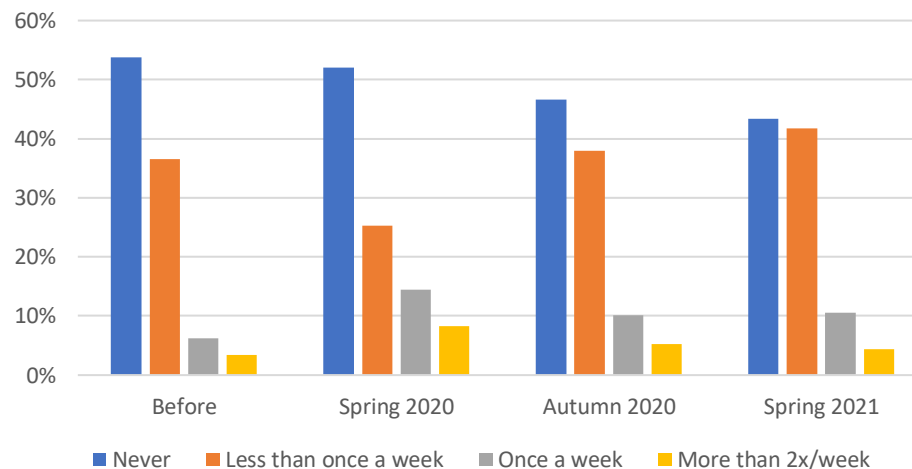

Modal split for shopping (necessities)

Frequency of shopping of necessities

Frequency of online shopping

Highlights of findings - shopping

- More than 50% of shopping trips **by car**
- About 25% of shopping trips **by non-motorised transport**
- Quite conservative behaviour
- Significant increase of respondents who sometimes **shop online** (less than once per week)
- **Online shopping** – the highest potential is at „non essential“ goods (= other than grocery and drugstore goods)

Highlights of findings – leisure-time trips

- **Leisure-time trips** (for culture, sports, visiting friends, restaurants etc.)
 - In total we distinguish 9 types of activities (outside and online)
- **Outside activities** are expected to grow after the COVID pandemics
- The trips are mostly done by **cars (about 50%) during the pandemics**
- **PT - 28 % before the pandemics**
- **Non-motorised transport 15 %** (through time more or less stable)

- Analysis of **subjective perceptions** of COVID-19 (through focus groups):
 - consequences on activities, travel behaviour and
 - attitudes to transport modes, mainly PT + evolution of attitudes during COVID waves
- **Our respondents:** PT users + those who left PT, stopped using shared mobility services (incl. Taxi) during COVID waves,
- **Our key question:** how to change PT conditions to keep users and what measures are most welcome to feel COVID-safe in PT system

Quality and safety of PT services is decisive.

- **Good communication** on special anti-COVID measures, incl. marking
- Number of **vehicles** and vehicle capacity (allowed n. of passengers)
- PT service intervals, travel time and final **flexibility** at interchanges
- Possibility of contactless payments in PT vehicles
- **Hygienic regulations:** masks mandatory, disinfection, distancing in vehicles and at stops (also drivers from passengers), more frequent cleaning and airing of vehicles etc.

- Analysis of the **Covid-19 evolution** and **transport / mobility management**
- Attitudes, experiences and measures **governed from several types of institutions:**
 - Municipalities
 - Regional authorities
 - Transport coordinators and providers
 - Regional hygienic stations
 - State authorities
- Method: **structured interviews** with representatives

Efforts of the institutions to protect citizens and transport providers.

Measures of prevention:

- Staggered or organised shopping (in shops), e-shops or integration with other purposes
 - Reservation systems for clients
 - Prevention of trips („forced/recommended home-office“, online service)
 - Staggered commuting (shifts)
 - Transport system with safety measures
 - Regional hygienic stations – tracing, staggered testing / vaccinating
 - State authorities – new decrees
- How to cover increased financial costs?
- Due to lower revenues – pressure on state and regional budgets

- **Main output** = report for municipalities and public authorities with recommendations and good praxis (available in June 2021)
- **Exchange of good praxis with Slovakia** - UNIZA – University of Žilina, Slovakia
- **Further analysis among PT users and recommendations on how to make PT more attractive to users**

**TRANSPORT
AND MOBILITY**
research team

THANK YOU FOR YOUR ATTENTION!

MOBILITY LAB HELSINKI

Citizen-centric innovations enabling better mobility services and transition towards sustainability – case examples from Helsinki, Finland

ECOMM 2022, Turku Finland

Janne Rinne, Forum Virium Helsinki

Welcome to explore the testing opportunities in Helsinki!

Through the Testbed Helsinki website you can comprehensively find development and testing opportunities for new products and services offered by the City of Helsinki. The site is specifically aimed at companies and RDI actors. The key content areas of our testing platform activities are EdTech, Built Environment, Health & Wellbeing, and Smart Mobility.

Welcome to explore the testing opportunities in Helsinki!

Read more

MOBILITY LAB HELSINKI

An aerial, high-angle photograph of a dense urban landscape, likely in Helsinki. The image shows a complex grid of buildings with various colored roofs, including shades of blue, green, red, and brown. The perspective is looking down from a height, creating a sense of scale and density. The text is overlaid in the center of the image.

FORUM VIRIUM HELSINKI

Objectives

- World-class testbed and innovation environment
- Better solutions for users
- References and new business
- Improved practices in supporting innovations
- Umbrella for smart mobility activities in Helsinki

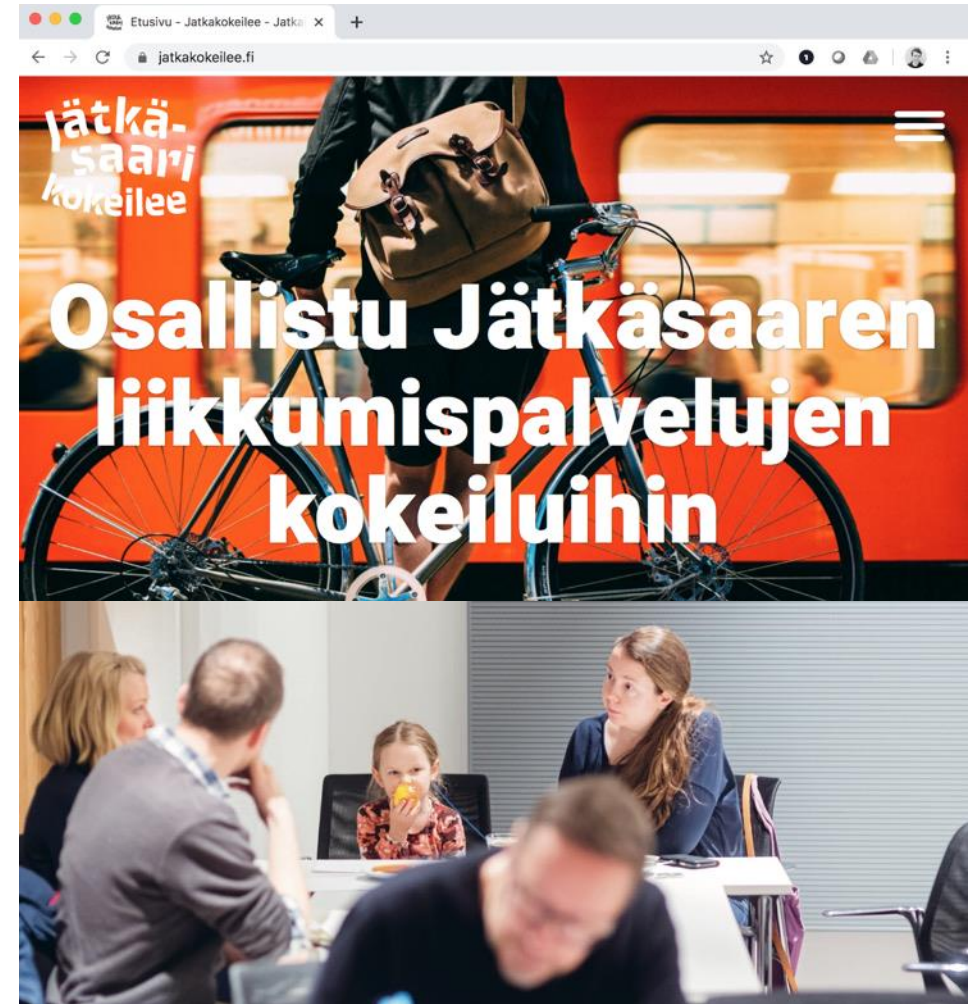

Collaboration, communication, concrete piloting

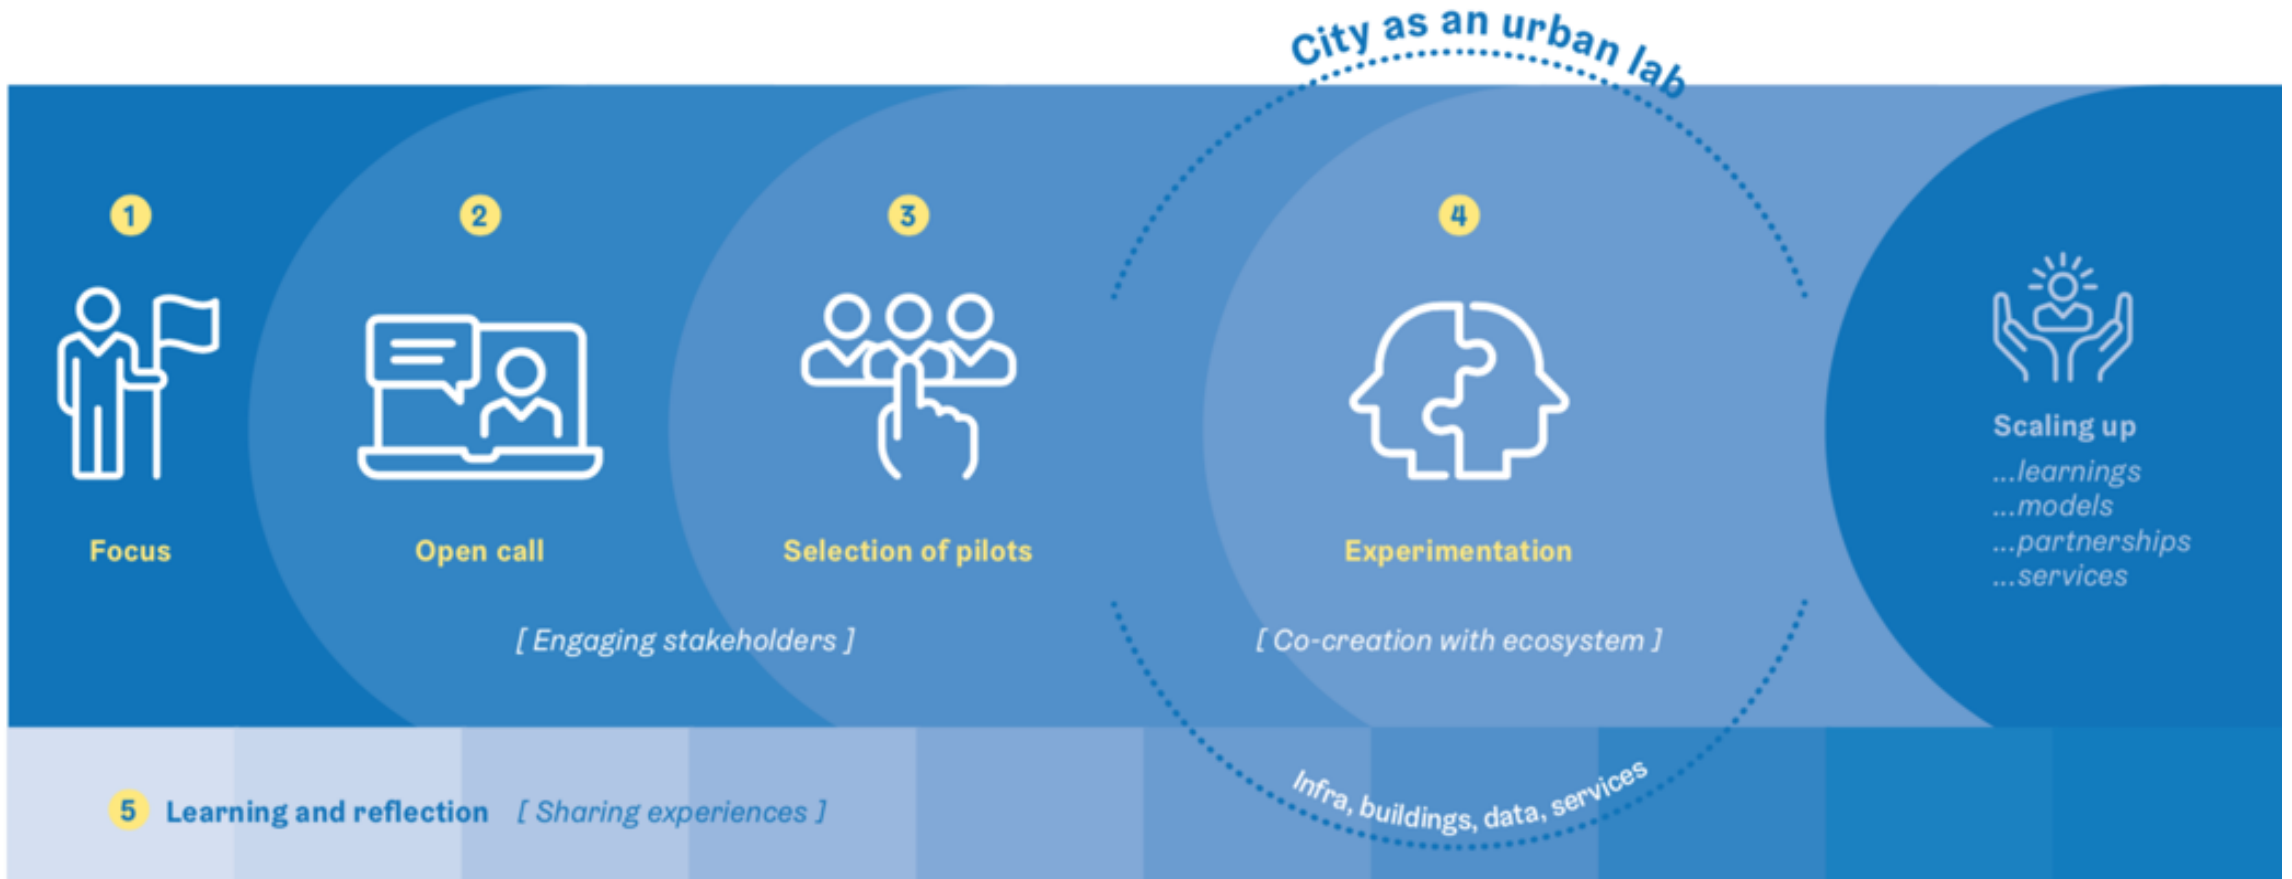

Residents as co-creators

- Residents involved
 - Defining focus for piloting rounds
 - Selecting pilots in expert jury
 - Experimentation stage: co-creation with planners, end-user feedback
- Mobility Lab present in local events and social media groups
- Contacts to local gatekeepers

Agile piloting engages residents

Cargo bike sharing

- Piloting shared cargo bike service in urban neighbourhood in Helsinki, summer 2019
- Alternative to car in transporting people and goods (e.g. grocery shopping, kids to kindergarten)
- Follow-up 2020 & 2021
- Service provider: NeZeco (FI)

6Aika

Vipuvoimaa
EU:lta
2014–2020

Cargo bike sharing

- Cargo bikes available to local residents of Jätkäsaari
- 6 shared cargo bikes
- Regular and electric bikes
- Geofenced locations for parking in parks, yards of residential buildings
- 500 registered residents in the pilot, about 200 actual users (2019 pilot)

Ride-sharing from school to hobbies

- Agile pilot by a local football club PPJ
- Saving time of families
- Lower price of early practice hours compensate transportation costs
- From agile pilot to permanent activity in the club (on hold due to Covid)
- [A guidebook](#) for other sports clubs (over 500 downloads)

6Aika

Vipuvoimaa
EU:lta
2014–2020

Callboats – On-demand electric ferry

- Electric boat service piloted in Helsinki 2020 & 2021
- Fully electric & on-demand to Vartiosaari, a popular recreational island in Eastern Helsinki
- Idea from Helsinki's participatory budgeting
- 10 000+ passengers

Key takeaways

- Residents can have a key role in introducing sustainable mobility services in cities
- Mobility Lab's co-creative approach highlights residents involvement
- Expert knowledge is needed in assessing the feasibility of proposed ideas
- Mobility Lab is responsible for coordinating the actual implementation (e.g. co-creation, permits, installments)
- When documented carefully, the pilot results and experiments support further development and scaling up

***Engaging citizens and
promoting sustainable mobility
within the Austrian mobility
lab initiative***

*Kathrin Raunig
AustriaTech at ECOMM 2022, Turku*

Content

- 1. Our understanding of a real-world laboratory**
- 2. Austrian mobility labs**
- 3. The Austrian mobility lab initiative**

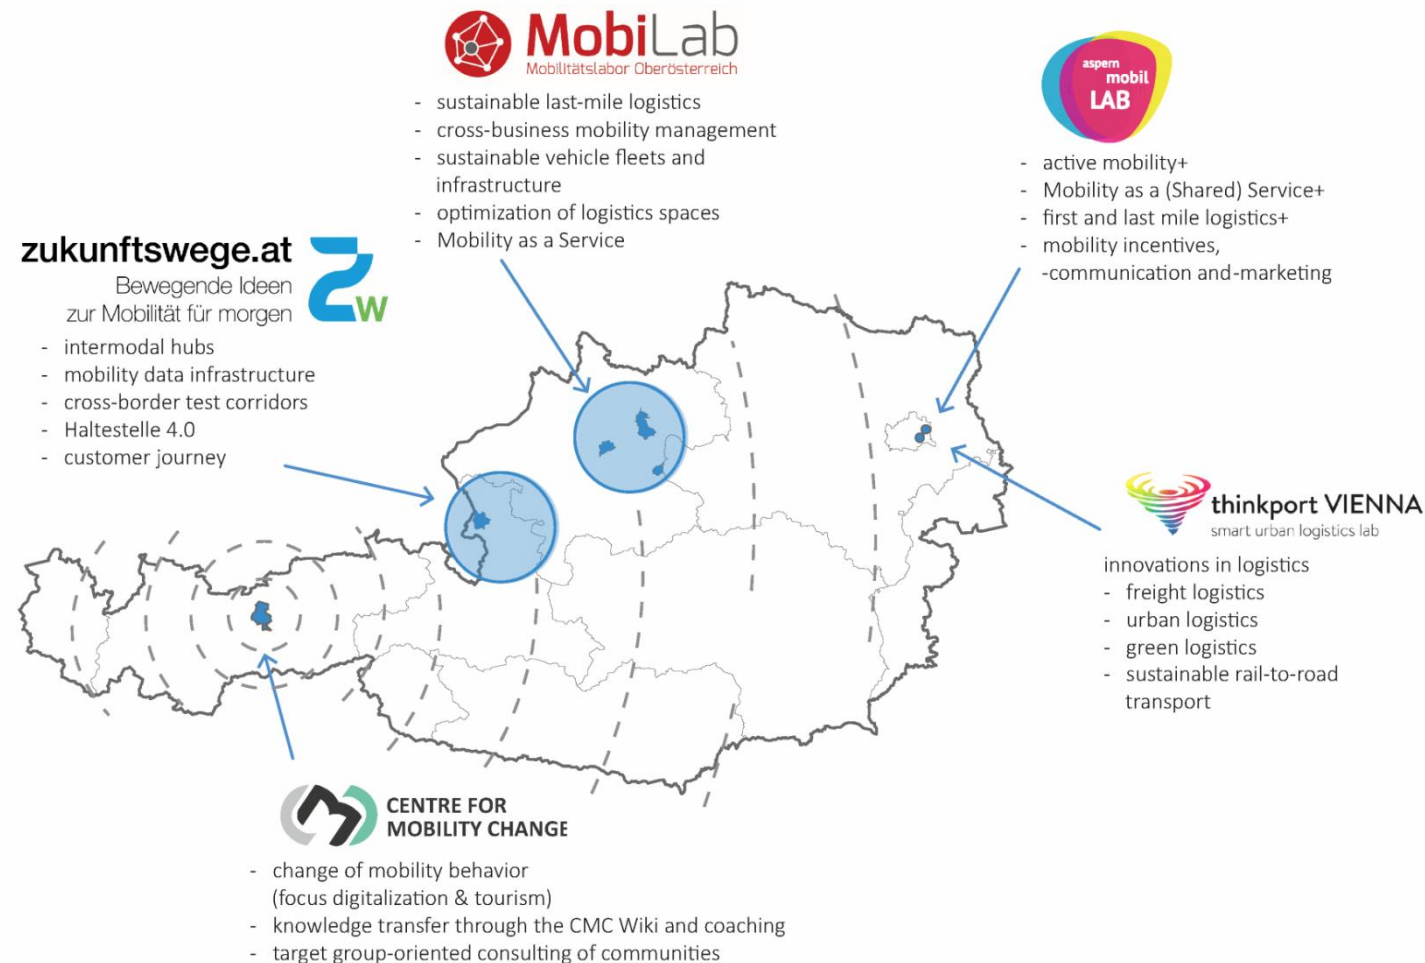

What is a real-world laboratory?

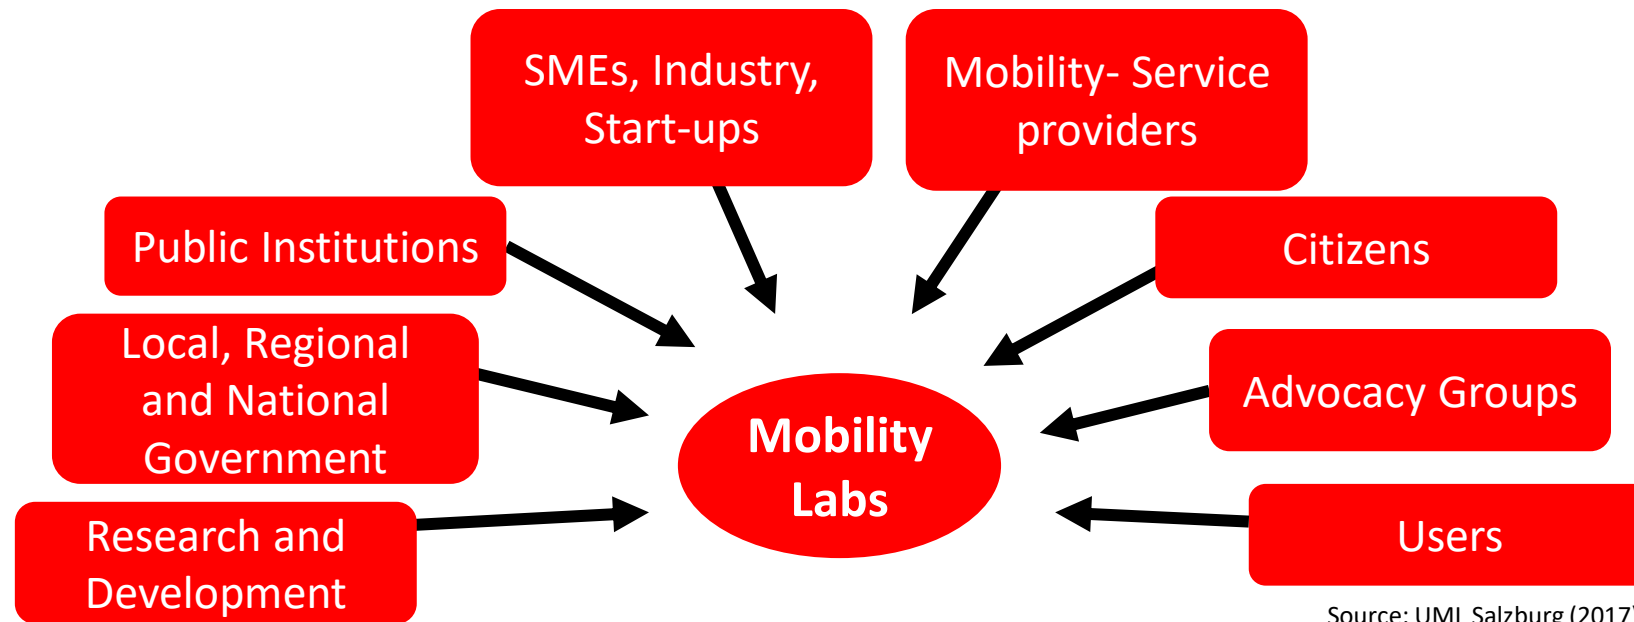

What are the key services of Austrian mobility labs?

- ❖ They provide a cooperative setting that enables exchange & cooperation between different stakeholders.
- ❖ They provide a dedicated research infrastructure to develop the mobility of the future.
- ❖ They are test environments, in which piloting and optimization can take place under real-world conditions.
- ❖ They bring innovations in contact with future users and decision-makers.
- ❖ They transfer knowledge and practical experience to stakeholders as well as citizens
- ❖ They can provide helpful, strategic input for the public sector because of their regional expertise about mobility challenges.

A short history of: The Austrian mobility lab initiative

How can you profit from the Austrian mobility labs?

- ❖ Discuss real-world and living lab methods (co-creation, design-thinking, citizen science, citizen engagement)
- ❖ Discover our experiences in building up and operating a real- world lab in different topographic and geographical areas.
- ❖ Transfer adapted solutions and innovations developed in the Austrian mobility labs to your city or region.
- ❖ Learn from our experience in setting-up a mobility lab initiative and platform
- ❖ Cooperate within EU-projects

Thank you for your attention!

Progressive ITS solutions for public transportation

Live and operational in
**more than 26
countries worldwide**
*(from Asia, Middle East, Europe
to Australia)*

travelers using our
ticketing every month
**5bn+
passenger trips
annually**

Value of the projects
delivered
**>\$200m value
of projects**

A lot of operators using
systems daily basis
**>110 PTO's
using systems**

Tens of thousands of
assets connected
**~35k connected
vehicles**

How integrated Demand-Responsive Transport solution will change the way we think about public transport

Sven Rosenberg
Head Of Sales

Suburbs and rural areas
lack of frequent public
transport service

Public transport operators
require efficiency and better
monitoring of the service

Demand-Responsive Transport Solution (DRT)

DRT boosts flexibility and accessibility for passengers, while empowering transport service providers to operate with maximum efficiency.

Ridango's DRT solution supports

Social transport (paratransit)

- Provides efficiency for the Public Transport Authority by combining multiple people's journey into a single trip
- Makes entitlement handling and payment simple and convenient

Public transport in rural areas

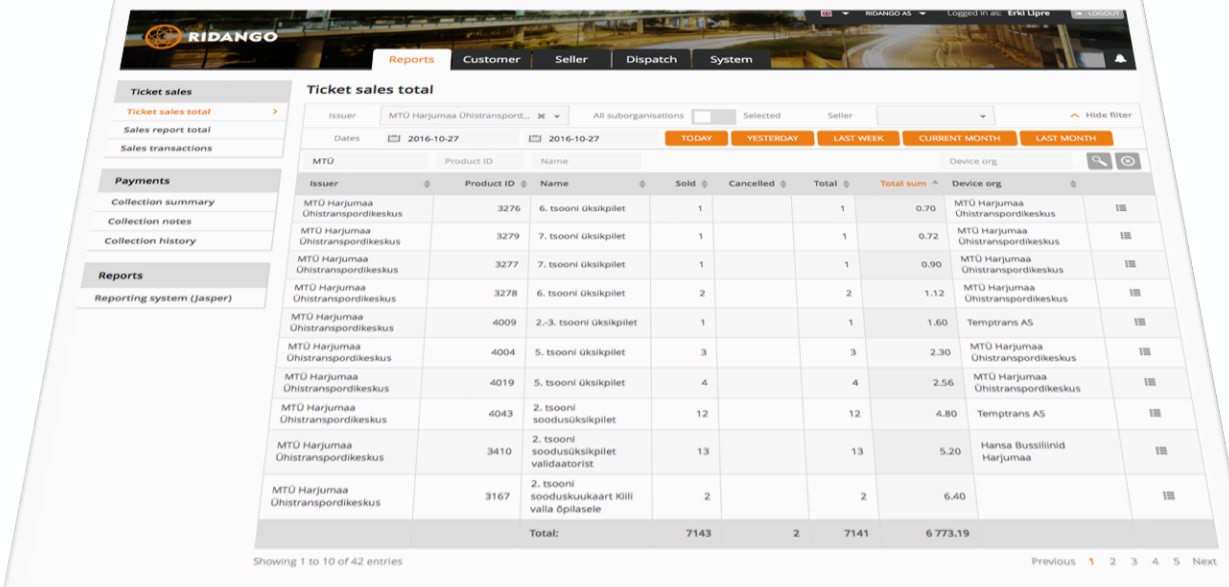

- Provides efficiency for Authority or Operator by using the right vehicle and making trips only, when needed
- For passengers - gives access to public transport network in a time and location of their choosing
- Can also be applied to school transport

DRT solution can be an extension of Ridango's account-based ticketing

SEVERAL MODULES OF ACCOUNT-BASED TICKETING SOLUTION ARE USED

- Account management
- Database
- Travel cards
- Core functionality (ticketing products, entitlements, etc.)

Ticket sales total

BENEFITS FOR THE OPERATOR/AUTHORITY

Optimized logistics

System assisted route optimization, integration with public transportation.

Higher efficiency

Increase in efficiency by dispatching the vehicle with suitable seating capacity.

Customer management

System allows to easily add customers, manage entitlements and orders.

BENEFITS FOR THE CUSTOMER

Travel availability

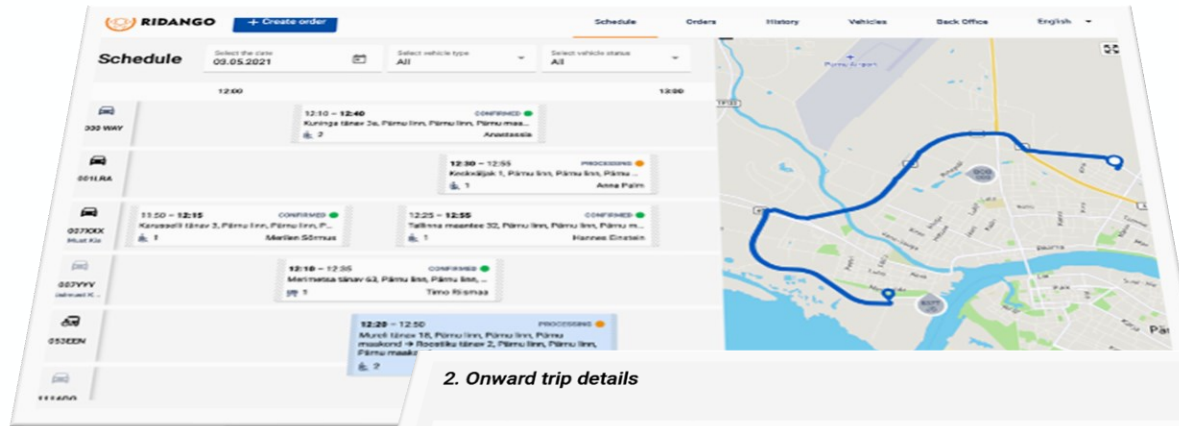

A custom approach to customer needs. Point-to-point service at any time, all personal specific travel needs to be considered.

Easy payment

Multiple payment methods; cash, bank card, travel card, invoice.

Convenient service ordering

Multiple channels (app, web, phone) are available for placing service orders and viewing service history.

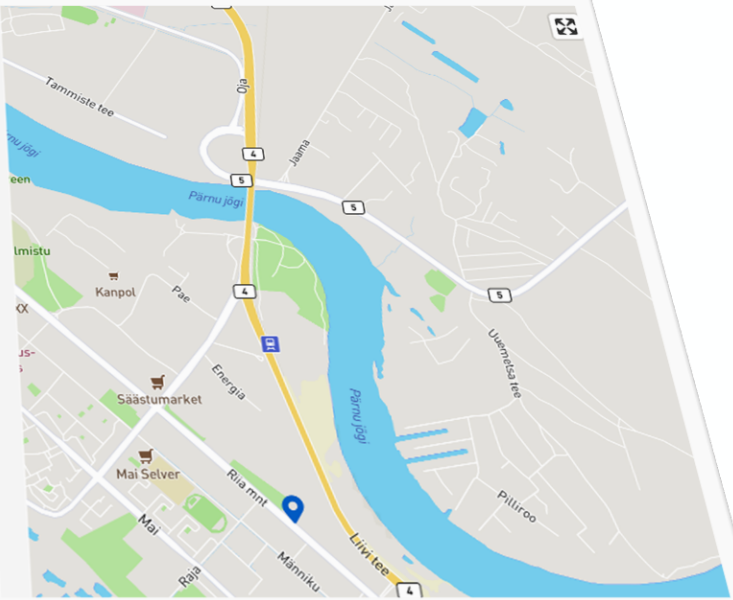

Operator tool as a
responsive website
